

Facade Anti-green

Properties

Concentrated cleaning agent for removal of fouling on all external surfaces.

- Efficient removal of fouling

Use

For exterior use on facades, masonry, woodwork, roof tiles, glass, plastic, etc.

To be used at +5 °C. Please notice that if the product is used at e.g. +20 °C the efficiency will increase and the waiting time will shorten correspondingly.

Application

Cleaning before painting

Remove dirt and impurities with Flügger Facade Clean. Follow the instructions indicated on the packaging. Then apply Flügger Facade Anti-green and let dry.

The surface is now ready to be painted.

Cleaning without subsequent painting

Apply by low-pressure sprayer, paint brush or brush until saturation of the substrate is achieved. After 1-4 days, depending on the degree of the growth, remove the residues with a stiff brush and water.

If the substrate withstands cleaning with a high-pressure cleaner, you can also remove the residues this way.

Preventing cleaning

Flügger Façade Anti-green is very suitable as preventive protection against fouling. Apply and let dry without washing off.

Storage: Cool, frost-free and tightly closed

Technical Data

Product Type	Cleaning
Dosing	1:4
Nominal spreading rate (m ² /ltr.)	6
Cleaning of Tools etc.	Water
